

This research paper will review the issue of the carbon footprint of electrical energy consumption and calculate the carbon footprint resulting from electrical energy consumption in the ...

In the heart of Baghdad, a critical issue has been brought to light that could reshape how cities approach water distribution and energy efficiency.

Key outcomes of the project include the development of the National Energy Efficiency Action Plan (NEEAP) and the establishment of an Energy Efficiency Center.

Instead of communicating large volumes of information, the project needs to communicate only two elements - the importance of energy efficiency, which should be self-evident to citizens in an energy ...

In a country with a high carbon intensity for electricity, and where access to reliable electricity remains a priority, the project is a significant contribution to the modernization of Iraq's ...

UNDP is developing the five-year project "Promoting Carbon Reduction Through Energy Efficiency (EE) Techniques in Baghdad City", following support from the vertical UNDP fund for Global Environment ...

This report evaluates the carbon footprint of Baghdad Governorate, focusing on key contributors such as transportation, energy production, industrial activities, and waste management.

To promote low carbon development in Iraq through supporting the design of a regulatory framework for enhancing Energy Efficiency (EE) in buildings and the creation of an enabling environment for its ...

In the heart of Baghdad, at the University of Technology, a groundbreaking study is reshaping our understanding of how smart buildings can slash energy consumption.

This study investigates the energy balance and thermal comfort conditions of a university teaching space in Baghdad, Iraq, with the objective of evaluating design strategies aimed at ...
