

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future grid dominated by carbon-free yet intermittent energy sources, ...

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

Latvia's Energy Strategy 2050 outlines major changes in renewable energy production and storage, with significant investments planned in wind, solar, biomass, and biogas, as well as in ...

Hanersun has announced the commissioning of a 1.15MWh commercial energy storage project in the Latvian capital Riga. The project, featuring five units of the company's HNESS 230-L ...

At the MIT Energy Initiative's Annual Research Conference, industry leaders agreed collaboration is key to advancing critical technologies amidst a changing energy ...

By 2030, the expected rise in energy storage deployment in Latvia will not only facilitate renewable energy use but also potentially reduce dependency on fossil fuels. A shift towards self ...

Summary: The Riga battery energy storage project represents a critical step in advancing renewable energy integration and grid stability in the Baltic region. This article explores the bidding process, ...

The predominant long-term development planning document in the country, Latvia Sustainable Development Strategy 2030 sets the principal goal for the energy sector in that it must ensure the ...

Making clean energy investments more successful Tools for forecasting and modeling technological improvements and the impacts of policy decisions can result in more ...

Energy Policy Review of Latvia 2024 will be launched today at an event in Riga by IEA Deputy Executive Director Mary Warlick alongside Latvia's Minister of Climate and Energy Kaspars ...

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing ...

As of 2025, Latvia's energy storage capacity has grown 300% since 2020, with Riga leading this charge [8].

Energy storage policy updates riga

This isn't just about keeping smartphones charged; it's about rewriting Europe's energy rules.

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed ...

The MIT-GE Vernova Climate and Energy Alliance, a five-year collaboration between MIT and GE Vernova, aims to accelerate the energy transition and scale new ...

A look at how AI can be used to help support the clean energy transition by helping to manage power grid operations, plan infrastructure investments, guide the ...
