

Is Rabat a sustainable city?

I belong to a city that has been evolving positively for 20 years. Rabat has one of the world's highest rates of green space per square meter per capita. This focus on sustainability is linked to the city's heritage and geographical position. A forest surrounds the city, the world's largest natural cork oak forest, which is a significant asset.

How sustainable is agriculture in peri-urban Rabat?

Agriculture in peri-urban Rabat faces challenges such as rising input costs, an aging workforce, and labor retention issues, threatening farm sustainability. This study compares the sustainability of organic and conventional farms using the IDEA method, adapted to the local context.

Is Rabat a green city?

Greening cities through urban green spaces is critical, and Rabat has one of the world's highest rates of green spaces. This has been a long tradition since the early 20th century, but it has been strengthened recently, especially with the "Rabat, City of Light, Cultural Capital" vision.

Are organic agrosystems sustainable in Rabat?

The overall analysis of the sustainability of organic and conventional agrosystems in the peri-urban area of Rabat shows average results for the three sustainability scales. The agro-environmental scale recorded an average score of 63.1, the socio-territorial scale scored 45.3, and the economic scale scored 68 (Supplementary Material).
