

Extensive arrays of solar panels, situated on serene seas near the Equator, have the potential to supply virtually boundless solar energy to densely populated areas in Southeast Asia and...

With calm seas and mild winds, some equatorial regions are ...

Vast arrays of solar panels floating on calm seas near the Equator could provide effectively unlimited solar energy to densely populated countries in Southeast Asia and West Africa.

Floating solar panels could provide unlimited renewable energy to densely populated countries in Southeast Asia and West Africa, potentially powering a billion people by 2050.

Researchers in Australia suggest that floating solar on parts of the ocean near the Equator could power the entire world several times over.

With calm seas and mild winds, some equatorial regions are prime candidates for massive floating solar arrays. Although many people know about wind's offshore potential, the ...

According to a new study, solar panels floating on seas close to the Equator could produce sufficient energy to power countries with dense populations in Southeast Asia and West Africa.

Equatorial Power (EP) is a clean energy company specialising in the development, construction, and operation of solar hybrid mini-grids, typically ranging between 50-100kW, in ...
