

Is there an oversupply of new energy storage batteries

Dive Brief: The global market for lithium-ion batteries is expected to remain oversupplied through 2028, pushing prices downward, as lower electric vehicle production targets in the U.S. and ...

Despite achieving energy densities up to 300 Wh/kg, cycle lives exceeding 2000 cycles, and fast-charging capabilities, lithium-ion batteries face significant challenges, including safety risks, ...

A boom in battery storage has bolstered the demand outlook for lithium in 2026, driving hopes for an accelerated turnaround for an industry struggling with oversupply.

In this article, I'll walk you through all the important battery energy storage system statistics, where it started, how much it has grown, which countries are leading, how the market looks,...

Batteries in electric vehicles (EVs) are essential to deliver global energy efficiency gains and the transition away from fossil fuels. In the NZE Scenario, EV sales rise rapidly, with demand for EV ...

If demand slows or remains on its current trajectory, there will be an oversupply of batteries in 2025 and 2030, even if only the highest-scoring companies meet their production goals.

Battery manufacturers are facing a demand crisis, a new report from AlixPartners says. Capacity to build EV batteries far outstrips demand globally, a new report says. It's worst in China, but...

Bloomberg recently reported that the United States is at risk of battery oversupply as purchases and production of EVs decline. Interestingly, this can be contrasted with China's ...

Under the Department of Energy Office of Manufacturing and Energy Supply Chains (MESC) Battery Materials Processing and Manufacturing Grants Program, DOE has committed approximately \$5 ...
