OverviewHistoryBackgroundDesignStylesTypesMaterialsElectrical parametersIn the early 1950s, General Electric engineers began experimenting with porous carbon electrodes in the design of capacitors, from the design of fuel cells and rechargeable batteries. Activated charcoal is an electrical conductor that is an extremely porous "spongy" form of carbon with a high specific surface area. In 1957 H. Becker developed a "Low voltage electrolytic capacitor with porous carbon electrodes". He believed tha...

Super farad capacitors - energy storage devices with capacities thousands of times greater than traditional capacitors - are making this possible. Let's examine how these technological marvels work and where ...

Ideal for electric vehicles, renewable energy storage, industrial machinery, and high-power electronics, this capacitor ensures efficient and reliable performance even in extreme conditions.

Ultracaps (aka Supercapacitors) also work extraordinarily well in extreme hot or cold. In winter, the Ultracap delivers a much-needed burst of energy to vehicles using a typically slow-cranking AGM battery.
