A linear increase in final primary energy consumption was observed in Kosovo between 2008 and 2020, averaging 1.4 % a year. Despite the progress in recent years, the long-term trend is ...

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your ...

It also includes non-energy uses of energy products, such as fossil fuels used to make chemicals. Some of the energy found in primary sources is lost when converting them to useable final products, ...

Consumption of electrical energy in Kosovo has increased continuously. The constant increase of economic development and population have increased the energy demands.

Electricity consumption and peak demand in Kosovo grew more than 90 percent between 2000 and 2010, stabilized from 2011 to 2018, but increased by another 20 percent from 2018 to 2021. ...

This paper presents several scenarios characterized by alternative assumptions for European electricity prices and domestic electricity production in 2023 in order to gauge their potential impact on the ...

According to the Kosovo Agency of Statistics, during December last year, gross available electricity was 899.56 GWh, while electricity consumption was 637.06 GWh or 4.75 percent higher ...

OverviewElectricity consumptionPolicy and regulationRenewable energy targetsElectricity generationTransmissionDistributionTariffsConsumption of electrical energy in Kosovo has increased continuously. The constant increase of economic development and population have increased the energy demands. Even though the generating capacities are increasing mostly in the form of renewables, to cover the demand, Kosovo imports electrical energy in certain periods of time (mostly during the winter).
