

Large-scale energy storage projects suspended

More than \$14 billion in clean energy investments in the U.S. have been canceled or delayed this year, according to an analysis released Thursday, as President Donald Trump's pending megabill has ...

As project developers scramble to adapt, one thing's clear: the era of "build first, ask questions later" in energy storage is officially over. The projects that survive this shakeout will likely set new ...

But as more energy storage is added, residents in some places are pushing back due to fears that the systems will go up in flames, as a massive facility in California did earlier this year.

Fueled by a flood of government support in the Inflation Reduction Act (IRA), companies announced 19 US battery component or mineral extraction projects, representing \$6.7 billion in planned ...

Since federal clean energy tax credits were passed by Congress in August 2022, a total of 34 projects have been cancelled, closed or downsized, according to data from E2 and Atlas Public ...

The U.S. has resumed permitting of solar and storage on federal land but developers face a lack of agency staff and uncertainty over tax credits.

According to local news outlets, three battery energy storage system (BESS) projects in Alberta, Canada and another in Staten Island, New York, have been dropped in January alone.

This year has been rough for climate technology: Companies have canceled, downsized, or shut down at least 16 large-scale projects worth \$8 billion in total in the first quarter of 2025,...

Residential, commercial, industrial, and utility users are beginning to install energy storage systems to fulfill their energy and reliability needs, but challenges remain to deploying these systems at scale.
