

Photovoltaic panels rented to ordinary people

Can renters install solar panels on their own?

In most cases, renters can't install solar panels on their own-- major structural changes like roof installations require landlord approval. However, that doesn't mean you're out of options. In fact, 2025 sees new opportunities opening up for tenants to benefit from solar -- without footing the full bill.

Should landlords consider solar photovoltaics?

Solar photovoltaics (PV) is one of the most advanced renewable energy technologies and the most relevant for landlords to consider, thanks to the following benefits. PV can be installed on existing buildings with minimal disturbance during construction and operation, using roof space that would otherwise remain empty.

What is the difference between community solar and residential solar?

While the size of a residential solar installation is measured in kilowatts, community solar projects are measured in megawatts, meaning that a single community solar project can power hundreds (or even thousands!) of properties - both rented and owned.

How can a renter benefit from community solar?

If you're a renter looking to benefit from solar, the best way to start is to compare community solar projects on the EnergySage Community Solar Marketplace. By subscribing, you can filter by all sorts of project details, read about individual developers and panel locations, and compare your estimated yearly savings.
