

Popularization of household solar power generation

US Solar Market Insight is a quarterly publication of Wood Mackenzie and the Solar Energy Industries Association (SEIA).

The report is based on address-level data for 3.4 million residential households across the country that installed solar onsite through year-end 2022, representing 86% of all U.S. residential ...

The new Center survey asked Americans how common three different types of solar panel developments are in their community: small-scale solar development on homes, somewhat ...

Dual-use applications such as agrivoltaics, floating PV, and infrastructure-integrated PV are becoming increasingly relevant, helping balance land use, food production, and renewable energy generation.

Scholars have explored factors influencing its adoption and proposed measures to foster its development. This paper systematically reviews the literature on factors influencing the adoption ...

In the last decade, solar has grown with an average annual rate of 26 percent, reaching a capacity of over 138 gigawatts in 2023. In that same year, solar energy accounted for 55 percent of ...

Find out how many solar energy residential systems are in the U.S., which state leads the way, and where this trend is heading.

If you're considering going solar but not sure about how everyone else in the U.S. is liking it, tune in to this solar survey run by Forbes Home.

We expect both small-scale and utility-scale solar to continue growing through 2024. In some states, small-scale solar capacity is growing faster than the U.S. average in response to local ...

Solar energy has become increasingly popular in American households within the last decade. Solar adoption is soaring, with 4.7 million systems operating as of 2023. Thanks to federal ...
