

Power stations phase out photovoltaic panels

Germany has set itself a dual goal with its energy transition, or *Energiewende*: The country wants to move from fossil fuel-based energy generation to a largely carbon-free energy sector while also ...

In the rapidly evolving energy sector, Single Phase Hybrid Inverters are becoming integral to renewable energy systems. These devices play a crucial role in bridging solar power generation with energy ...

A group of four Republican members of the House of Representatives proposed the Ending Intermittent Energy Subsidies Act to phase out tax credits for solar and wind projects.

The objective of this paper is to analyze the current status of the environmental impact of PV power plants under these changing conditions in terms of CO₂ emissions, land use, pollutant and ...

The impacts, however, are uncertain, particularly at the regional scale. Climate change will alter hydropower production, bioenergy and agricultural yields, thermal power plant efficiencies, and ...

Diablo Canyon 1 and 2, California, scheduled to shut down in November 2024 and August 2025, respectively, because of a settlement with labor and environmental groups to replace the ...

Washington, D.C. -- Congresswoman Julie Fedorchak (R-ND) spoke on the House Floor to highlight ten reasons why we must phase out tax credits for wind and solar energy.

Often initiated because of concerns about nuclear power, phase-outs usually include shutting down nuclear power plants and looking towards fossil fuels and renewable energy.

Fearful of its energy security without Russian gas, the German government delayed its plan to close the final three plants in December 2022. Some urged a rethink.

We explore how nuclear shut-downs in the United States could affect air pollution, climate and health with existing and alternative grid infrastructure.
