

Server racks for field operations networked type

What is arcTiv server & network rack?

ArcTiv Server and Network Racks provide high-quality, high-density solutions for storing and securing servers and IT equipment in data centers. The product lines are simple to construct and configure with ArcTiv aisle containment systems for a complete infrastructure management system.

What is a server rack?

Check them out! A server rack is a piece of equipment used to organize, secure, and store multiple servers in a data center or other IT environment. It is a standardized metal frame with mounting spaces (U spaces) for servers and other equipment, and is designed to support and protect these devices.

What is an open frame server rack?

Open frame server racks consist of sturdy posts without side panels or doors, offering unparalleled accessibility for equipment installation and maintenance. Their open design allows for excellent airflow, making them ideal for secured environments like network labs, test facilities, and server rooms where physical security is managed externally.

Why should you choose a server rack?

It directly impacts the efficiency, security, and scalability of your IT infrastructure. Here are key reasons why your choice matters: Equipment Protection: A well-designed server rack shields servers, switches, and networking gear from physical damage and dust, ensuring reliable performance and longer equipment life.
