

Solar System Recommendations

How do I choose a solar system?

The size of your solar system depends on your power needs and available sunny roof space. Look at your electricity bill to determine your average usage and consider the number of sunny hours in your area. Consult a solar installer or use the government's online calculator, for estimates, considering potential shading and future energy needs.

What type of solar system do I Need?

The type of solar system you need also depends on other factors, including your regional climate and your electricity usage. Understanding your circumstances will help determine the size of your solar system, the number of solar panels you need, and whether you should add battery storage. The next thing to consider is the inverter.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

What is the best solar system for a home?

Next, we'll answer some frequently asked questions about the best home solar systems. Which type of solar system is best for a home? When choosing a solar system for your home, monocrystalline panels are often the best choice. These panels are made from a single, pure silicon crystal, making them highly efficient and long-lasting.
