

Solar power with grid backup in manila

How do solar energy systems work in the Philippines?

Metro Manila, 2021 - A lot of residential and business solar energy systems in the Philippines are connected to the electricity grid, or "grid-tied". That means, when the system is producing more electricity than what your building needs, the excess is fed back into the grid through net metering.

How much is an off-grid Solar System worth in the Philippines?

In comparison with a grid-tied system, an off-grid solar system's price increases remarkably, with a minimum of 30%. 1kWh of solar energy is worth PHP 9-11 in the Philippines. If the 1kWh is stored in a solar battery, it can only supply around 70% of the stored 1kWh back to your appliances due to physical losses.

How to choose a solar system for your home in the Philippines?

Choosing the right system comes down to understanding your energy needs, location, and budget. Let's break down the three main solar options for homes in the Philippines. Off-grid systems operate without any connection to the traditional electric grid. They store solar energy in batteries, giving you power even at night or on cloudy days.
