

Special oil for wind turbine generator

There's a reason so many companies trust Mobil industrial lubricants to keep their wind turbines spinning. We deliver optimum equipment protection and oil performance in a wide range of ...

Wind turbine gear oil is a specialized lubricant crucial for the efficient and long-term operation of wind turbine gearboxes, which convert slow rotor speeds into high generator speeds.

We aim to enlighten renewable energy professionals, environmental engineers, and enthusiasts about the different types of lubricants used in wind turbines and their pivotal purpose in ...

What type of oil is best for wind turbines: conventional mineral-based oil or synthetic oil? In the wind energy industry, synthetic oils have a better reputation than mineral-based oils due to several factors.

Wind turbine gear oil, specifically designed for gearbox lubrications, utilizes synthetic and mineral-based oils with EP additives. This lubrication is vital for the smooth operation of generator ...

Reliable gear oil reports with high-accuracy oil analyses which provide specific details about oil condition and allow oil change intervals to be scheduled exactly.

We developed Klüberplex BEM 41-141, a single lubricating grease for the main, generator, yaw and rotor blade bearings, which outperformed all the other greases compared in standardised tests. This ...

Gear Oil: This is the most critical oil in a wind turbine. It is used to lubricate the gearbox, which multiplies the rotor's speed to generate electricity. Gear oils are typically synthetic-based to ...

Check out our full line of premium synthetic lubricants for your industrial wind turbine applications.

That's why we offer special oils and greases made just for wind turbines. Our products help reduce breakdowns, make parts last longer, and cut down on maintenance. With smart tools to track oil ...
