

The Wind Boy generator is from China

China has successfully launched the world's most powerful flying wind turbine, marking a significant step towards affordable and reliable green energy.

China has long been recognized as a global powerhouse for its manufacturing base but may be at a turning point where its WTG OEMs become increasingly pivotal players on the global renewable ...

China has successfully completed the first flight of its home-designed floating wind turbine, the S1500, in Hami, Xinjiang. The system passed strict tests, including full desert assembly ...

Last year, China installed the world's largest offshore wind turbine off the coast of the southern province of Fujian. The 18MW turbine is 20% more powerful than the largest turbine built by...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

China's wind power advancements have been instrumental in driving global renewable energy goals. The Global Wind Energy Council (GWEC) reported record wind turbine shipments in ...

China tests the S1500 aerial wind turbine that operates without towers, reduces costs and takes advantage of constant winds at more than 500 meters.

The airship, known as the "power station in the sky", uses a helium-filled balloon to lift a lightweight generator and harness wind energy at high altitudes. The electricity generated is then ...

This guide delves into the impressive advancements in Chinese wind turbine generator technology, exploring their technical features, different types, and the implications for the global ...

On July 19, amid the winds of the Bohai Sea, the world's largest wind turbine began generating power at the Huaneng Xianrendao Thermal Power Plant in Yingkou, Liaoning province.
